

# SYSTEMS AND METHODS FOR PERSONALIZED ACCESS TO INTERNET-ENABLED TELEVISION

## ABSTRACT OF THE DISCLOSURE

5 A user registration component receives a request for information, as  
well as criteria for delivery of the requested information. An information monitoring  
component monitors an information source for satisfaction of the delivery criteria. An  
information delivery component delivers the requested information from the  
information source to an Internet-enabled television system in response to the  
10 delivery criteria being satisfied. A user notification component within the Internet-  
enabled television system notifies a user concerning the delivered information using  
a requested notification format.
